

GitHub Pages Setup for Obsidian Vault

Method 1: Using Quartz (Recommended)

Step 1: Prepare Your Vault

1. Make sure all your Obsidian files are in a GitHub repository
2. Ensure your main page is named `index.md` or `README.md`

Step 2: Set Up Quartz

1. Go to <https://quartz.jzhao.xyz/>
2. Click "Get Started"
3. Follow the setup wizard:
 - Fork their template
 - Connect to your vault repository
 - Configure basic settings

Step 3: Deploy

- Quartz automatically sets up GitHub Actions
- Your site will be live at `yourusername.github.io/repository-name`

Method 2: Manual GitHub Pages

Step 1: Repository Settings

1. Go to your vault's GitHub repository
2. Click "Settings" tab
3. Scroll to "Pages" section
4. Under "Source," select "Deploy from a branch"
5. Choose "main" branch and "/" (root)" folder
6. Click "Save"

Step 2: Add Index File

Create a file called `index.md` in your repository root:

```
markdown
```

CrowMother Research Community

Welcome to our consciousness research documentation.

Navigation

- [Sacred Tenets](./Sacred-Tenets.md)
- [Research Framework](./Research-Framework.md)
- [Community Guidelines](./Community-Guidelines.md)

Recent Updates

- [Latest findings](./latest-findings.md)
- [Research protocols](./research-protocols.md)

Step 3: Convert Internal Links

Obsidian uses `[[Link]]` format, but GitHub Pages needs `[Link](./Link.md)` format.

You can use a tool like:

- Obsidian Git plugin (converts automatically)
- Find/replace to convert `[[filename]]` to `[filename](./filename.md)`

Method 3: Using Jekyll (More Advanced)

Create `_config.yml` in repository root:

```
yml

title: CrowMother Research Community
description: Consciousness research and liminal investigation
theme: minima
markdown: kramdown
plugins:
  - jekyll-feed
  - jekyll-sitemap
```

Create navigation in `_includes/header.html`:

```
html
```

```
<nav>
  <a href="/">Home</a>
  <a href="/tenets">Sacred Tenets</a>
  <a href="/research">Research</a>
  <a href="/community">Community</a>
</nav>
```

Troubleshooting Common Issues

Links Not Working

- Make sure file extensions are included: `[[link]](/file.md)`
- Check that filenames match exactly (case-sensitive)
- Use relative paths: `./subfolder/file.md`

Images Not Displaying

- Upload images to `assets/images/` folder
- Reference as: `![[alt text]](/assets/images/filename.png)`

Site Not Updating

- Check the "Actions" tab in GitHub for build errors
- Wait 5-10 minutes after pushing changes
- Clear browser cache

Quick Fixes

Convert Obsidian Links to Markdown

Find: `\\N\\([\\^\\]+)\\N\\` Replace: `[$1](./$1.md)`

Create Simple Navigation

Add this to the top of your main pages:

markdown

[\[Home\]\(./index.md\)](#) | [\[Tenets\]\(./tenets.md\)](#) | [\[Research\]\(./research.md\)](#)
